Elavon

Powering payments for growth

The right payment solution can help streamline operations, increase customer satisfaction, and drive revenue. At Elavon, we understand the unique needs of enterprise-level businesses and can support the entire payment acceptance transaction cycle so you can focus on your core business. We provide front-end authorizations, back-end settlement, business-to-business invoicing, and all customer support functions.

For more than 30 years, Elavon has provided secure payment solutions for enterprise customers. Let us do that for you.

Payments everywhere, any way your customers want to pay

Our single global platform provides a reliable solution to accept payments. Whether your customers make payments face-to-face, online, on a mobile device, over the phone or through the mail, Elavon has the right processing and integrated solutions.

With a broad range of technologies, our scalable payment solutions are tailored to meet the needs of any size business, in any industry or processing environment.

Hosted payment gateway

Fusebox, our PCI DSS certified hosted payment gateway, allows you to accept any payment type, from anywhere, routed safely to the processor of your choice. It connects seamlessly to a vast array of point of sale (POS) and property management system (PMS) providers and offers a one-to-many connectivity.

Payment optimization

Our payment solutions consultants can identify opportunities to help your business mitigate fraud, improve chargeback management and reduce costs associated with accepting credit card payments.

Omni-commerce platforms

Accept payments online, in-person, by phone, mail or by mobile device through Converge, our payment platform. Your customers will be able to collect payments in any format, allowing them to integrate all their payment locations into one payment platform.

Enterprise level data analysis

Leverage our Payments Core 365 view of your data to gain actionable results that will help your business grow. Our sophisticated and easy-to-use reporting platform can be integrated with your current accounting system for an automated reconciliation process. You can also access fund, batch and transaction level data in a single file, create key performance indicators to track performance for one or multiple locations, and build or refine customer profiles for targeted marketing campaigns.

Payment security

Our solution combines EMV with encryption and tokenization. Card data is encrypted at the point of entry and then tokenized before returning to the POS or PMS. Tokens have no value to hackers, thereby greatly reducing the risks inherent with holding payment card data for subsequent payment authorizations or transactions.
